Simulated truth, hidden from the monitor
Trip temperature (warm spells, thermal inertia)
Trip biology (b, T_{min}, lag, starting load)
Reference growth model (Baranyi–Roberts)
True label: limit passed by the horizon?
What a monitor sees and computes
Sensor (offset, noise, resolution)
Sampling (every 1, 15 or 60 min)
Score from the record (CSL or a rule)
Compare with the true label: AUC, paired bootstrap
